

Broken items

GoMotto Product Audit — Index & Root Cause Brief

Index of All Issues

Lead Insights Page → Why Leads Didn't Book (data science. Bug)

1. Michael Tweedy miscategorized (Scheduling Conflicts → should be Wants Written Quote First)
2. "Other" bucket overuse (53% of unbooked leads)
3. Bucket vs. customer card objection mismatch (Ethylene Regera)
4. Duplicate lead entries (Michael Tweedy appears twice)

Lead Insights Page → Unbooked Leads List (data science. Bug)

5. Booked lead showing as unbooked (Amanda Gattenby)
6. CSR not assigned despite booking (Amanda Gattenby)
7. Call summary unavailable (Amanda Gattenby)
8. Existing customer misclassified as unbooked lead (Joshua Crosby)
9. CSR not assigned — recurring (Joshua Crosby)
10. Call summary unavailable — recurring (Joshua Crosby)
11. Subcontractor solicitation misclassified as unbooked lead (Miranda)
12. Existing customer status check misclassified (Rincon Partners)

Lead Insights Page → Booking Rate Improvement Chart (lack of funds)

13. Flat lines showing days with no bookings when bookings did happen

Lead Insights Page → Kanban Board → Pending Column

14. Booked lead stuck in Pending (Gary Aull)
15. Call summary unavailable (Gary Aull)
16. CSR not assigned (Gary Aull)
17. Lead marked fully complete with no underlying data (Unknown Customer)
18. Booked lead stuck in Pending — recurring (Pareem Shah)
19. Call summary unavailable — recurring (Pareem Shah)
20. CSR not assigned — recurring (Pareem Shah)

Pipeline Page → Board → Unqualified Column (lack of integration)

- 21. Unqualified column only contains abandoned calls
- 22. Duplicate lead entries (Jean Cahill, Allison Johnson)
- 23. Empty cards when clicked
- 24. "Unknown Lead" name recurring
- 25. Pipeline header shows \$0k total value with 8 won deals

Pipeline Page → Board → Booked Column (lack of integration and STT problem)

- 26. Past-date appointments stuck in Booked column (Carla Woods)
- 27. No "Appointment Not Recorded" stage exists
- 28. Customer name inconsistency within same lead (Carla Woods / Karla Capichorto)
- 29. Booking status says "Not Booked" on a Booked-column lead
- 30. Redundant Booked vs. Appt Scheduled columns
- 31. Sales Rep Stage has zero leads — entire half of pipeline is dead

Pipeline Page → Outcome Section (lack of integration. These were all manual)

- 32. Won leads have no underlying data
- 33. Lost column is empty (impossible)
- 34. Review column full of empty cards
- 35. Duplicate Won leads (5 of 8 are duplicates)

Pipeline Page → Appointments List View

- 36. All appointments show "Unassigned" Sales Rep
- 37. All appointments stuck in "Pending" outcome
- 38. Impossible appointment times (1 AM, 3 AM, etc.)
- 39. Duplicate appointments
- 40. Generic locations ("AZ, US")

Call Logs Page (change date structure. Are there actually objections)

- 41. Wrong date on every call (07/04/2026)
- 42. Every call says "No Objection Detected"
- 43. "Qualified + Unbooked + No Objection" logical contradiction
- 44. Every call shows "Not Booked"

Sales Insights Page (bug. Not in multi tenant data leak. But creating baselines as zero and blank instead of dummy)

- 45. Wrong company's sales reps showing — multi-tenant data leak (LAUNCH-BLOCKING)
- 46. Placeholder data instead of empty state in Team cards
- 47. Placeholder/inaccurate data in Core KPI Metrics

Total: 47 issues across 9 distinct sections of GoMotto

Root Cause Brief

What's actually broken

The audit surfaces 47 issues, but they aren't 47 separate bugs. They cluster around a small number of root causes that cascade into everything else:

1. The summary/transcription pipeline is failing on a meaningful chunk of calls.

Every section of the audit has at least one "Call summary unavailable" lead, and those same leads are the ones with broken booking detection, missing CSR attribution, and wrong stage placement. When the summary fails, the AI has nothing to read from, so it defaults every downstream field to a placeholder: "Not Booked," "Unassigned," "Other," "Pending." This is the single biggest upstream cause of the visible chaos.

2. There is no shared source of truth across pages. The Lead Insights page, the Pipeline page, the Call Logs page, and the Sales Insights page all show different values for the same underlying call. Objections exist on one page and not another. Booking status is "Booked" in one view and "Not Booked" in another. CSR is named in the call summary but missing from the CSR field. Each page is reading from a different table, a different cache, or a different field, and nobody is reconciling them.

3. The classification logic has no fallback hierarchy and no confidence threshold.

When the AI can't confidently classify a lead, instead of flagging "low confidence" or routing to a human review queue, it forces a guess and tags "Other" or pushes the lead into the wrong column. That's why 53% of unbooked leads land in "Other," subcontractor solicitations end up as "Qualified," and existing customers calling about financing get treated as new leads.

4. The pipeline stages aren't time-aware or event-aware. Past-date appointments sit in "Booked" forever. Empty no-data records get marked as Stage 7 (Review). The Sales

Rep half of the pipeline is completely dead because nothing automatically advances from CSR Booked to Sales Rep Appt Scheduled. The pipeline is a frozen snapshot, not a live workflow.

5. There's no QA layer between the AI output and the user-facing UI. Placeholder data (180 recordings, 28% win rate identical across 3 reps) is being shown as real numbers. Multi-tenant data is leaking between accounts. Duplicate entries are rendering without dedup. The product is shipping AI output directly to the screen with no validation, deduplication, sanity checks, or empty-state handling.

The systemic pattern

GoMotto is an AI-first product that depends on a fragile pipeline (audio → transcript → summary → classification → field population → UI display). Each step has failure modes, and there's no graceful degradation between steps. When one stage fails, the failures don't get flagged — they get hidden behind defaults. The defaults then cascade through every dashboard, KPI, and view in the product, creating dozens of visible bugs that all trace back to the same handful of broken upstream processes.

This is what a product looks like when it's been built feature-first without enough investment in the data plumbing underneath.

How a Technical Program Manager (TPM) Company Can Help

A TPM firm wouldn't write code for GoMotto — they'd impose the engineering discipline that turns these 47 surface bugs into a small, prioritized roadmap with clear ownership and verification gates. Specifically:

1. Root cause mapping and dependency tracing. A TPM would take this audit and collapse it into the 5–7 actual root causes, then build a dependency tree showing which fixes unblock which downstream issues. This is exactly what the audit already started doing — formalize it, assign it, and track it.

2. Define failure-mode requirements that don't currently exist. REQ-073 (no placeholder data for empty KPIs) is the only requirement in the current PRD that addresses graceful degradation. A TPM would expand this into a full set of failure-mode requirements: what happens when transcription fails, when classification confidence is

low, when a field can't be extracted, when two views disagree. Every AI output should have a defined fallback state.

3. Build a single source of truth and enforce it. The fact that the Lead Insights page, Pipeline page, and Call Logs page disagree on the same lead is a data architecture problem, not a UI problem. A TPM would scope a unification project: one canonical data model per lead, with all views reading from the same source, and reconciliation logic when conflicts exist.

4. Establish QA gates between AI output and UI display. Every value the AI produces should pass through a validation layer before reaching the user: dedup, confidence threshold, sanity checks (no 1 AM appointments, no fractional bookings, no \$0 won deals), and tenant isolation enforcement. The multi-tenant data leak (Issue #45) is the kind of bug a QA gate would catch immediately and a TPM would refuse to ship without.

5. Create a defect intake and triage process. Right now this audit is happening in a doc. A TPM would convert it into a tracked backlog with severity, owner, ETA, and verification criteria. Each issue would have a test case so the same bug can't reappear after a fix.

6. Run launch readiness reviews. A TPM would block launch on the launch-blocking issues (multi-tenant data leak, broken booking detection, dead Sales Rep half of pipeline) and create a clear "go/no-go" framework with measurable exit criteria. Right now those decisions are happening informally.

7. Coordinate across the team gap that just opened. With Tushar leaving and Shahar (TPO) ramping up, there's a real risk of dropped ownership. A TPM fills that gap during the transition — owning the cross-functional coordination between engineering, product, and the AI/ML pipeline so nothing falls through while the team restructures.

Bottom line

GoMotto doesn't need 47 bug fixes. It needs 5–7 root cause fixes, a data architecture cleanup, a validation/QA layer, and a coordinator who can run the work end-to-end. A TPM company is the most cost-effective way to get all of that without making a permanent senior hire mid-launch — and it directly addresses the gap left by Tushar's departure while Shahar gets up to speed.

GoMotto Audit Log — Input vs Output

Lead Insights Page:

Objection Miscategorization

Location: Lead Insights page → "Why Leads Didn't Book"

Issue #1: Michael Tweedy (data science)

Filed under: Scheduling Conflicts (plus "Customer Needs Time to Decide" and "Other") Real reason: Wants written quote first + competitive pressure. Summary captured the call accurately but the AI forced it into the wrong bucket. **Status:** Open

Issue #2: "Other" Bucket Overuse (data science)

The problem: 53% of unbooked leads are landing in "Other." That means more than half the time, GoMotto can't identify a real reason the lead didn't book and defaults to a hedge tag. The five existing buckets (Scheduling Conflicts, In-Person Estimates Only, Service Fee Concerns, Immediate Service Unavailability, Other) are missing real objection types that show up regularly in calls. "Other" should be a rare exception, not the majority bucket. Until this is fixed, the "Why Leads Didn't Book" section on the Lead Insights page can't be trusted to show actual reasons — it's mostly noise.

Status: Open — not launch-blocking, fix post-launch

Leads filed under "Other" — what they actually wanted:

Lead	What the lead wanted	Should be categorized as
------	----------------------	--------------------------

Viren Sutton	Already had an estimate, was negotiating contract clarity (per-sheet wood pricing) and asking for a price reduction from \$20,781 to \$20,000 to offset hiring a separate painter	Price Negotiation in Progress (and arguably shouldn't be in "unbooked" at all — this is an active deal with a 4/25 completion date)
Ethylene Regera	Wanted a quote for a fallen tile on her ~7–8 year old tile roof but paused to contact the original installer first to check if work would void an existing warranty	Warranty Verification Pending

Issue #3: ObjectionBucket vs. Customer Card Objection Mismatch (could be due to multiple conversations)

The problem: Ethylene Regera is filed in the "Other" bucket on the Lead Insights page, but the customer card at the bottom shows the objection as "Customer Needs Time to Decide." The bucket and the card disagree. This is a separate display/data sync bug — wherever the bucket assignment is being written, it's not the same source as what the card reads from. Needs investigation into whether the AI is producing two different tags or whether one view is stale.

Status: Open

Audited, Correctly Categorized

- Gordon Grantham — Scheduling Conflicts ✓
- Naomi — Scheduling Conflicts ✓
- Casa Grande homeowner — In-Person Estimates Only ✓
- Matt Sanchez — In-Person Estimates Only ✓
- Aarsh — Customer Needs Time to Decide + In-Person Estimates Only ✓
- Out-of-state tile roof caller — In-Person Estimates Only ✓

Running accuracy: 6 of 9 correct (67%)

Duplicate Lead Entries

The problem: Michael Tweedy appears twice in the "Other" bucket. Same lead, duplicated entry. Either the lead is being written to the bucket twice or the display is rendering duplicates. Worth checking the full unbooked dataset to see if other leads are also duplicated.

Unbooked Leads List Accuracy

Location: Lead Insights page → "Unbooked Leads" area

Issue #1: Booked Lead Showing in Unbooked List (data science/integration issue)

Lead: Amanda Gattenby

The problem: Amanda is appearing in the "Unbooked Leads" area but she actually booked an appointment for April 14th between 10am–12pm. Booking status on her customer card also shows "Not Booked" which is wrong. This is a booking detection failure — GoMotto isn't recognizing that an appointment was set on the call. Worth checking how widespread this is across the unbooked list, because if booked leads are leaking into the unbooked bucket, every metric on the Lead Insights page is built on bad data.

Status: Open — potentially launch-blocking depending on scope

Issue #2: CSR Not Assigned to Booked Lead (integration plus lead pool discussion)

Lead: Amanda Gattenby

The problem: Katie answered Amanda's call and booked the appointment, but the customer card shows "CSR Stage · Unassigned." Katie isn't being attributed to the lead, which breaks rep-level credit for the booking in any leaderboard, performance metric, or Sales Rep Card view.

Status: Open

Issue #3: Call Summary Unavailable (lack of funds)

Lead: Amanda Gattenby

The problem: Amanda's card shows "Call summary unavailable" in both the Overall Engagement section and the Conversations section, despite the call being 5 minutes long and

successfully booked. The summary generation pipeline failed. This may be the root cause of Issue #1 — if the summary failed to generate, the AI may have defaulted the booking status to "Not Booked" because it had no transcript to read from.

Status: Open — possibly the root cause of Issue #1

Issue #4: Existing Customer Misclassified as Unbooked Lead

Lead: Joshua Crosby

The problem: Joshua is showing in the "Unbooked Leads" area, but he's not a lead at all — he's an existing customer who already bought a roof and was calling with a question about a financing payment to GreenSky. This is a lead classification failure: post-sale customer service calls are getting routed into the unbooked leads pipeline. That inflates the unbooked leads count, pollutes the conversion math, and means real unbooked leads are buried among customer service calls.

Status: Open — potentially launch-blocking depending on scope

Issue #5: CSR Not Assigned (Recurring) (integration plus lead pool discussion)

Lead: Joshua Crosby

The problem: Angela answered Joshua's call but the customer card shows "CSR Stage · Unassigned." Same problem as Amanda Gattenby (Issue #2) — CSR attribution is broken on this lead too. This is now a pattern, not a one-off. Worth checking how widespread CSR-unassigned is across the full unbooked list.

Status: Open — pattern emerging

Issue #6: Call Summary Unavailable (Recurring) (lack of funds plus ST integration)

Lead: Joshua Crosby

The problem: Joshua's card shows "Call summary unavailable" in both Overall Engagement and Conversations sections, despite a 6:05 call. Same as Amanda Gattenby (Issue #3). Two leads in a row with missing summaries — this is a pattern, not isolated. The summary generation pipeline is failing on a meaningful chunk of calls. May also be the upstream cause of Issue #4 (without a summary, the AI can't classify Joshua as an existing customer with a financing question, so it defaults him into "unbooked lead").

Status: Open — pattern emerging, possibly the root cause of Issue #4

Issue #7: Subcontractor Solicitation Misclassified as Unbooked Lead (lack of tenant configuration. We don't know that solicitation is not to be considered as unhooked)

Lead: "Unknown Customer" — Miranda from Contracting Miles LLC

The problem: Miranda called to offer her services as a licensed contractor for repairs after Lyon's roofing jobs — she's a B2B vendor solicitation, not a customer at all. She has no roof, no property, no service request. GoMotto classified her as a "Qualified" unbooked lead. This is a third type of lead classification failure on top of Issues #1 and #4: now booked appointments, existing customers, and B2B vendor calls are all leaking into the unbooked leads pipeline. The "Unknown Customer" name is also a flag — the system couldn't even capture who called but still pushed her into the qualified lead pipeline.

Status: Open — pattern confirmed, lead classification is broken across multiple call types

Issue #10: Existing Customer Status Check Misclassified as Unbooked Lead (was this in scope)

Lead: Rincon Partners (Stacey)

The problem: Stacey called to check on the status of an already-scheduled job at a commercial property but was classified as a "Qualified" unbooked lead — the fourth distinct call type leaking into the unbooked pipeline.

Dashboard — Booking Rate Improvement Chart Issues

Location: Lead Insights page → Booking Rate Improvement chart

Issue #1: Flat Lines Showing Days With No Bookings (lack of funds)

The chart has multiple days where the line sits flat at zero, which would mean no bookings happened on those days. That's not true — bookings did happen on those days. Either the data isn't being pulled correctly or the chart is dropping days entirely and rendering them as zero.

Status: Open

New Section: Lead Insights Page → Leads Dashboard (Kanban Board) → Pending Column

Issue #1: Booked Lead Showing in Pending Column

Lead: Gary Aull

Gary called Lyon's Roofing to confirm they serve Maricopa and successfully booked an appointment, but his card is sitting in the "Pending" column of the Kanban board instead of moving to "Booked." The Kanban stage tracker on his card also still shows him at Stage 2 (Qualified), not Stage 3 (Booked). This is the same booking detection failure pattern from the Unbooked Leads section — booked appointments aren't being recognized and are getting stuck in the wrong stage across multiple views of the product.

Status: Open

Issue #2: Call Summary Unavailable (funds)

Lead: Gary Aull

Gary's card shows "Call summary unavailable" in both the Overall Engagement section and the Conversation section, despite a 12:44 call. Same summary pipeline failure seen on Amanda Gattenby, Joshua Crosby, and Rincon Partners in the Unbooked Leads section. This is likely the upstream cause of Issue #1 — without a summary, the AI can't detect that a booking happened and defaults to "Not Booked" / "Pending."

Status: Open

Issue #3: CSR Not Assigned

Lead: Gary Aull

Card shows "CSR Stage · Unassigned." Same recurring CSR attribution failure from the Unbooked Leads section. Now confirmed across two separate areas of the Lead Insights page.

Status: Open

Issue #4: Lead Marked Fully Complete With No Underlying Data (bug)

Lead: "Unknown Customer" (4803738006)

The card shows all 7 pipeline stages completed through Review, but every tab underneath is empty — no summary, no booking status, no appointment info, no result info, not even a customer name. The system is reporting a fully closed deal with zero supporting data behind it.

Status: Open

Issue #7: Booked Lead Stuck in Pending (Recurring) (bug)

Lead: Pareem Shah

Katie answered Pareem's call and booked a roof inspection, but the card is sitting in the Pending column at Stage 2 (Qualified) instead of moving to Booked. Same failure as Gary Aull (Issue #1) — second confirmed instance of real bookings getting stuck in Pending in the Kanban board.

Status: Open — pattern confirmed

Issue #8: Call Summary Unavailable (Recurring)

Lead: Pareem Shah

Card shows "Call summary unavailable" in both Overall Engagement and Conversation sections despite a 6:31 call. No analysis was performed at all. Same pattern as Gary Aull and the Unbooked Leads section — likely the upstream cause of the booking detection failure.

Status: Open — pattern confirmed

Issue #9: CSR Not Assigned (Recurring)

Lead: Pareem Shah

Card shows "CSR Stage · Unassigned" even though Katie answered and booked the call. Same recurring CSR attribution failure.

Status: Open — pattern confirmed

Pipeline page

Pipeline Page → Board → CSR Stage → Unqualified Column

Issue #1: Unqualified Column Only Contains Abandoned Calls. (integration issue)

Location: Pipeline page → Board → CSR Stage → Unqualified

Every lead in the Unqualified column is tagged "abandoned," meaning the column is only catching hang-ups and dropped calls. Real unqualified leads — like Miranda from Contracting Miles LLC who called Lyon's to solicit subcontractor work (logged earlier in the Unbooked Leads audit) — aren't landing here at all. She's a textbook unqualified lead (B2B vendor, no service request) and instead got pushed into the Unbooked Leads pipeline as "Qualified." So the Unqualified column is mislabeled: it's actually an "Abandoned Calls" column, and real unqualified leads are leaking into the wrong pipeline.

Status: Open

Issue #2: Duplicate Lead Entries (service titan)

Location: Pipeline page → Board → CSR Stage → Unqualified

Jean Cahill appears 3 times and Allison Johnson appears at least 2 times in the same column, all with the same phone numbers and timestamps. Same duplicate entry bug seen earlier with Michael Tweedy in the "Other" bucket of the Why Leads Didn't Book section. The duplication issue is now confirmed across two separate areas of the product.

Status: Open — pattern confirmed

Issue #3: Empty Cards When Clicked

Location: Pipeline page → Board → CSR Stage → Unqualified (out of scope. We don't care)

Clicking into any of these unqualified cards shows no data inside. Even abandoned calls should have a phone number, timestamp, and minimal call metadata visible. The cards on the board show the basic info (name, number, timestamp) but the detail view is empty.

Status: Open

Issue #4: "Unknown Lead" Name (Recurring)

Location: Pipeline page → Board → CSR Stage → Unqualified (feature addition)

Another lead displaying as "Unknown Lead" instead of a real name. Third instance of the unknown name issue (Miranda in Unbooked Leads, Unknown Customer in Kanban Pending, now this one). Pattern of the system failing to extract or capture caller names is confirmed across multiple sections.

Status: Open — pattern confirmed

Issue #5: Pipeline Header Shows \$0k Total Value (lack of data and integration)

Location: Pipeline page → header

The Pipeline header reads "91 leads · \$0k total value · 8 won." Eight won deals with zero total value is impossible — won deals should have a deal size attached. Either deal sizes aren't being captured at all or the rollup math is broken. Worth checking if Deal Size is empty across the board (consistent with the "Deal Size" field appearing empty on every customer card audited so far).

Status: Open

Pipeline Page → Board → Booked Column

Issue #1: Past-Date Appointments Stuck in "Booked" Column (integration)

Lead: Carla Woods (appointment was 2026-04-06, 10:00–11:00 AM) **Location:** Pipeline page → Board → Booked column

Carla's appointment was yesterday but her card is still sitting in the "Booked" column instead of advancing to "Appt Ran" or "Outcome." There's no recording from the technician visit and no follow-up data on the card. This isn't an isolated case — multiple leads in the Booked column have appointment dates in the past and aren't moving forward in the pipeline. The system isn't advancing leads through stages based on time elapsed or appointment completion, so the Booked column is becoming a graveyard of stale appointments.

Status: Open

Issue #2: No "Appointment Not Recorded" Stage Exists

Location: Pipeline page → Board

When a technician visits a property but no recording or outcome data comes back (whether the rep forgot to record, the recording failed, or the data never synced), there's nowhere for the lead to go in the pipeline. It just sits in "Booked" forever. There needs to be a dedicated "Appointment Not Recorded" or "Awaiting Outcome Data" stage so these leads don't pollute the active Booked column and so reps/managers can see which appointments have a data gap that needs to be filled in manually.

Status: Open — feature request, not a bug

Issue #5: Redundant Booked vs. Appt Scheduled Columns (for when reps haven't yet been assigned)

Location: Pipeline page → Board

"Booked" (CSR Stage) and "Appt Scheduled" (Sales Rep Stage) are the same thing — when a CSR books an appointment, that IS a scheduled appointment. The two columns should be merged or auto-sync.

Status: Open

Issue #6: Sales Rep Stage Has Zero Leads (integration)

Location: Pipeline page → Board → Sales Rep Stage

Both Sales Rep Stage columns (Appt Scheduled and Appointment Ran) are empty while CSR Booked has 20 leads. Nothing is advancing from the CSR side to the Sales Rep side, so the entire Sales Rep half of the pipeline is dead.

Status: Open

Pipeline Page → Outcome Section

Issue #1: Won Leads Have No Data (test 8. Integration)

All 8 Won leads show "Appointment information not available" when clicked. Wins can't be verified or attributed.

Status: Open

Issue #2: Lost Column Is Empty (bug plus integration. There should be 0 but not out of 91)

0 leads in Lost out of 91 total — impossible. Lost deals are either being dropped or never categorized, making win rate untrustworthy.

Status: Open

Issue #3: Review Column Full of Empty Cards (test cards)

20 leads in Review, mostly "Unknown Lead," all with no data when clicked. Same empty Stage 7 pattern as the Kanban audit.

Status: Open

Issue #4: Duplicate Won Leads (bug)

Michael Duran appears 2x and Mark Genrich appears 3x in Won — 5 of 8 "wins" are duplicates of the same 2 customers.

Status: Open

Pipeline Page → Appointments Tab (List View)

Issue #1: All Appointments Show "Unassigned" Sales Rep

Every appointment in the list has "Unassigned" in the Sales Rep column. No appointments are tied to a sales rep, which breaks rep accountability and Sales Rep Card metrics.

Status: Open

Issue #2: All Appointments Stuck in "Pending" Outcome

Every visible appointment shows "Pending" outcome regardless of date — same problem as the Booked column on the Board view. Outcomes never get updated.

Status: Open

Issue #3: Impossible Appointment Times

Appointments are scheduled at 1:00 AM, 3:00 AM, 4:00 AM, 5:00 AM, 7:00 AM — no roofing company books inspections at 1 in the morning. Either the times are wrong, the timezone conversion is broken, or default placeholder times are being written when no real time is captured.

Status: Open

Issue #4: Duplicate Appointments

Joe Sever and Alvaro Lupinacci each appear twice in the list with different times/locations on the same day. Same duplicate pattern from earlier sections.

Status: Open

Issue #5: Generic Locations ("AZ, US")

Multiple appointments show only "AZ, US" as the location instead of a real address. Eric Winkleblack, Joe Sever, Lisa Sikora all have no street address captured.

Status: Open

Call Logs Page — Issues

Issue #1: Wrong Date on Every Call

Every call shows "07/04/2026" (July 4, 2026) — a date three months in the future. The system is either writing the wrong date or displaying the date format backwards (showing 04/07/2026 as 07/04/2026).

Status: Open

Issue #2: Every Call Says "No Objection Detected"

Every row in the Objections column says "None Detected," but the Lead Insights page clearly shows objections like Scheduling Conflicts, In-Person Estimates Only, and Customer Needs Time to Decide on these same leads. The objection data exists in GoMotto but isn't being pulled into the Call Logs view — the two pages are reading from different sources and disagreeing.

Status: Open

Issue #3: "Qualified + Unbooked + No Objection" Is a Contradiction

A lead can't be tagged Qualified AND Unbooked AND have no objection at the same time. By definition, if a qualified caller didn't book, something stopped them — that's an objection. Every row showing this combination is logically impossible. Either the objection wasn't detected when it should have been, or the data isn't syncing from the Lead Insights page.

Status: Open

Issue #4: Every Call Shows "Not Booked"

Every visible row says "No" in the Booked column, but real bookings exist in the system (Amanda Gattenby, Pareem Shah, Gary Aull, Osa Hemberg from earlier audits). The Call Logs page isn't recognizing any bookings at all — same booking detection failure pattern from the Unbooked Leads and Kanban Pending sections.

Status: Open

Sales Insights Page → Sales Team Stats → Team

Issue #1: Wrong Company's Sales Reps Showing

Location: Sales Insights page → Sales Team Stats → Team

The account being viewed is Lyon's Roofing, but the Team section is displaying sales reps from Arizona Roofers (Brandon Ludewig, Bradley Cohurst, Andrew Munoz). This is a major multi-tenant data leak — one customer's data is appearing in another customer's account. This is the most serious issue in the audit so far: if Lyon's can see Arizona Roofers' rep names and stats, Arizona Roofers can probably see Lyon's too. Data isolation between accounts is broken.

Status: Open — LAUNCH-BLOCKING, data privacy / multi-tenant security issue

Issue #2: Placeholder Data Instead of Empty State

Location: Sales Insights page → Sales Team Stats → Team

All three reps show identical hardcoded numbers (180 recordings, 28% win rate, 7/10 process, 6/10 skills) instead of pulling real data. If there's no data to display, these fields should show "0" or "—" per REQ-073 (no placeholder/fake data for empty KPIs). Fake numbers are worse than no numbers — they look real and mislead anyone viewing the page.

Status: Open — violates REQ-073

Issue #4: Placeholder/Inaccurate Data in Core KPI Metrics

Location: Sales Insights page → Sales Team Overview → Core KPI Metrics

Most KPIs show \$0 or 0%, but Follow-up Rate (17%), Team Script Adherence (15%), and Total Conversations (226) show suspicious numbers. Either the zeros are wrong or the percentages are placeholders — can't be both. Violates REQ-073.

Status: Open

Missing Features from Original MV1 Spec

Missing Features from Original MV1 Spec

1. Unbooked Lead Rehash — When a lead doesn't convert to a booked appointment, GoMotto automatically sends a context-based follow-up to the homeowner. The message draws from the call summary and specifically addresses why they didn't book, with the goal of rehashing them into an appointment.
2. Post-Appointment Buyer Follow-Up — When a sales rep runs an in-home appointment that doesn't close, GoMotto follows up with the homeowner to drive the sale. Follow-ups are context-aware and directly address the specific objections raised during the appointment.
3. AI Receptionist Fail-Safe — GoMotto acts as a backup receptionist. If the human receptionist doesn't pick up after a configurable number of rings, GoMotto answers the call via voice. Each company sets its own ring threshold before failover.
4. Voice-Based Role-Play with Sales Rep — After a sales rep finishes an appointment and the recording ends, they can role-play with GoMotto with their voice. Today this is chat-only, it needs to become a live voice conversation.
5. Clickable Objection Bookmarks on Customer Card — On the customer card, the post-appointment view needs clickable bookmarks that jump to specific moments in the recorded sales meeting. Objections raised during the appointment are listed out individually (e.g., price objection, spouse objection, timing), and clicking any one fast-forwards the recording to that exact moment in the conversation so the rep can listen in.
